You are a senior product designer + frontend engineer. Follow the Nouqta blueprint PDF (Sections 2, 4, 7, 15.1, 16). Keep all learner text in French. Work in the 4 phases below, in order. Finish and self-check each phase before starting the next. Do not invent features outside this prompt. Do not change screens not mentioned.

=== PHASE 0: RENAME (do first, 10 minutes) ===

- App name everywhere (header, <title>, manifest, certificate, share card, copy, comments): "Nouqta". Remove every "AlifBee", "AlifBee Academie" and "ArabiLearn".
- Logo: the Arabic letter nuun with its dot replaced by a small saffron ant. Flat vector, brand green background, rounded square.
- Mascot: "Nouqta" the ant, replaces the bee everywhere. Flat vector, 5 poses (wave, cheer, think, oops, sleep), brand colours, under 6 KB each, shown in Kids mode only (Adult mode: no mascot).

=== PHASE 1: FIXES ===

1. HOME LAYOUT
   - Today-card giant letter 140px, top-right, overlap max 16px, colour #BFE8D8, z-index below nothing interactive, never covering rows.
   - Defi du jour row: fixed 56px, flame + label left, chevron right.
   - Sticky Continuer: scroll padding-bottom = button + nav + 24px, with a 24px fade above the button so the path is never hidden.
   - Mono tag under the title: "FAMILLE n - NOM" (dynamic). Inactive step dots rgba(255,255,255,0.35).
   - Path: nodes staggered left/right, curved connector; current = saffron, done = green star, next = outline, locked = padlock.
   - 32px between hero, challenge row and path.
2. TRACING = SEPARATE STEPS
   - Tracing is a sequence: each body stroke is its OWN step, then a separate DOTS step if the letter has dots. Steps = bodyStrokes +

(dots > 0 ? 1 : 0). Never merge them, never hardcode one step.

- Show "Trait 1/2", "Trait 2/2", "Points" under the title. Finished
  strokes stay drawn in dark green.
- Dots must NOT be visible on the letter before the dots step. In the
  dots step the learner TAPS where the dots go (faint dashed targets
  in guide mode 1 only). Accept a tap within 2x the corridor; count
  must match: "Il manque un point" / "Un point de trop". Dots pop
  into place.
- Remove the stray dashed circle currently shown during the body
  stroke.
- Dot data (count, position): Alif 0; Baa 1 below; Taa 2 above; Thaa 3
  above; Jiim 1 below (inside bowl); Haa 0; Khaa 1 above; Daal 0;
  Dhaal 1 above; Raa 0; Zaay 1 above; Siin 0; Shiin 3 above; Saad 0;
  Daad 1 above; Taa-fort 0; Dhaa-fort 1 above; Ayn 0; Ghayn 1 above;
  Faa 1 above; Qaaf 2 above; Kaaf 0 (2 strokes); Laam 0; Miim 0; Nuun
  1 above; Haa-souffle 0; Waaw 0; Yaa 2 below.

- Guide = one smooth SVG path (round caps, width 14, #C9D6D1), not a chain of circles.
- Modes per step: guide with arrows, light guide (20 percent), no guide. The star needs the last mode passed.
- "Marquer comme fait" becomes a text button "Passer cette etape" (saved as skipped, no points). Add labels under the 3 icon buttons: Effacer, Animation, Guide.

3. LONG TITLES
   - Add "shortName" per letter (e.g. "Taa fort", "Dhaa fort", "Haa souffle") used in headers, chips, picker rows, sheets.
   - All titles: min-width 0, max 2 lines with ellipsis, font-size steps down for names over 12 chars. Nothing overlaps at 360px.

=== PHASE 2: INK, SOUND, HAPTICS, MASCOT ===

1. REED-PEN INK: variable stroke width. Width = clamp(18 - speed*k, 8, 18) px: slower = thicker, faster = thinner, smoothed (low-pass) so it never jitters. Round start, slightly tapered end.

Colour dark green
inside the corridor, red outside. Same renderer for animation and
user ink.

2. PEN SOUND: synthesize with WebAudio (no audio files): band-pass
   filtered noise whose gain follows draw speed, silent when still.
   Starts only after a user tap, respects the Sound setting.
3. HAPTICS: navigator.vibrate with feature detection and a Settings
   toggle. Patterns: stroke ok 15ms; step ok [10,40,10]; letter done
   [15,60,15,60,30]; error 30ms. Never vibrate on every pointer move.
4. MASCOT (Kids mode): Nouqta reacts: wave on home, cheer on success,
   think during quiz, oops on error, sleep when streak is at risk. In the
   Voir animation the pen-tip becomes the ant walking along the stroke
   (Kids only). Tapping the ant plays a tiny wiggle + sound.
5. Respect prefers-reduced-motion: replace motion by fades, keep sound
   and haptics optional.

=== PHASE 3: ENGAGEMENT FEATURES ===

1. STREAK SHEET: tapping the flame opens a bottom sheet: 7-day row (done = filled flame, today = ring, missed = empty), current and best streak, weekly rest day status.
2. WEEKLY GOAL: default 3 letters/week (choices 2, 3, 5 in Reglages).
   Progress bar on Home under the hero and on Moi; resets Monday.
   Completing it gives a badge and a small celebration.
3. "DEMAIN" TEASER on Home: row "Demain : <name>" with the next letter as a blurred silhouette + padlock. Never show the real shape (progressive rule). Tap: toast "Termine aujourd'hui pour la debloquer".
4. DEFI DU JOUR becomes tappable: bottom sheet with the challenge, a progress bar (e.g. 1/3) and reward preview.
5. HEADER: add a second chip with total stars, tappable -> Moi.
6. LETTER ALBUM ("Mon cahier", inside Moi):
   - Every mastered letter becomes a card (letter, name, date, stars).
   - Store the learner's FIRST successful trace and BEST trace as

simplified point arrays (Ramer-Douglas-Peucker, under 2 KB each).

- Tap a card -> sheet with a "Avant / Maintenant" slider comparing
  first vs best trace over the clean letter.
- Locked cards are greyscale silhouettes.

7. MINI-GAMES (1 minute each, 5 rounds, no timer pressure in Kids):
   a. "Assemble": drag letter tiles into the right order (RTL) to build
   a word from the unlocked-words list; tap tile to hear it.
   b. "Ecoute et choisis": hear a letter, pick it among 3-4 similar
   letters.
   Both use ONLY unlocked letters. They replace the plain review queue:
   the Defi du jour launches one of them. Reward: stars + streak credit.
8. SHAREABLE CARD: button "Partager" in Moi and on the celebration
   sheet. Generate a 1080x1080 PNG on a canvas (name optional, letters
   mastered, streak, Nouqta logo, brand colours). Use the Web Share API
   with file; fallback: download + a WhatsApp link with prefilled French
   text. No personal data on the image unless the

learner enables
"Afficher mon prenom".

9. BADGES grid in Moi (8): Premier trait, 3 jours d'affilee, Famille
terminee, Premiere photo, 10 etoiles, Lettre maitrisee, Objectif
hebdo, Premier mini-jeu. Locked = greyscale, goal shown on tap.
10. Celebration sheet after a letter: star flies to the counter, streak
+1 animation, mascot cheer (Kids), "Demain : ..." teaser, buttons
"Lettre suivante" (primary) and "Retour".
11. Every new element: min 48x48 target, pressed state (no hover),
French aria-label, dark mode, works at 360px.

=== PHASE 4 (SPEC ONLY - DO NOT BUILD NOW): READING LADDER ===
Just create the data structure and an empty "Histoires" entry hidden
until all 28 letters are mastered: levels = words, 2-3 word phrases,
short dialogues, micro-stories (3-5 sentences), longer stories and
proverbs. Each text has requiredLetters, vowel-marks on/off, tap-a-word
for audio + meaning, one comprehension question, and an audioUrl field

for real recorded audio (browser voice is only acceptable for letters).

=== MANDATORY SELF-CHECK BEFORE YOU SAY "DONE" ===
Do not report a pass you did not verify.

1. Create a dev-only page /dev/selftest that runs automatically and
   prints a PASS/FAIL table for:
   a. Text search finds zero "AlifBee", "AlifBee Academie", "ArabiLearn",
   "abeille", "bee" in the UI strings, manifest, title, assets.
   b. All 28 letters: stroke data exists; step count = bodyStrokes +
   (dots>0?1:0); dot count/position matches the table above.
   c. Tracing unit tests: perfect stroke passes; outside corridor fails
   'sort_du_guide'; short fails 'trop_court'; wrong dot count fails;
   dots never visible before the dots step.
   d. Tap-target audit: list every interactive element under 48x48 on
   Home, Lesson, Tracing, Lettres, Moi, sheets.
   e. Overlap/clipping audit at 360x740 and 390x844, including long names
   (Taa fort, Dhaa fort, Haa souffle).
   f. No hover-only feedback; reduced-motion

respected.
g. French audit: no English words in visible strings.
h. Contrast >= 4.5:1 on hero card and badges.
i. Album: first/best trace saved under 2 KB each; slider works.
j. Mini-games use only unlocked letters (test with 3 letters
unlocked).
k. Share card renders 1080x1080 and includes no name unless enabled.
l. Haptics and sound do nothing when disabled or unsupported (no
errors in console).

2. Manually walk Baa, Taa, Thaa, Jiim, Kaaf, Alif and confirm the number
of tracing steps differs correctly.
3. End your reply with: (a) the selftest table, (b) every failure and
its fix, (c) anything you could NOT verify, stated honestly.
If a check fails, fix and re-run before replying.
